

4 Years Of Misery, Drugs And A Pending Surgery... I Should Have Tried Chiropractic FIRST!

"I have been trying to get treatment for about 4 years now and nothing has worked. Finally, I realized that coming to a chiropractor was my last resort.

My back, arm and shoulders have had constant pain. The doctors had me on muscle relaxers. A Neurologist told me that I had carpal tunnel Syndrome. They told me that I should think about surgery and that it might make me better, worse or stay the same they did not know.

I took my sister to Rose Hill to get an x-ray one day and the first page I looked at out of the magazine I was reading was an ad for Dr. Digles. I decided to give Chiropractic treatment a try. I honestly did not think that Chiropractic was going to do to much for me.

My first impression was how professional everything was. Everything looked very high tech, and up to date.

I was coming 3 times a week and after the 2nd week I was probably 80 to 90% better. For the last 4 weeks I didn't have any pain.

My father also gets treated by a Chiropractor for the last several years. He swears by it and he has been telling me about it for the last couple of years.

I have already recommended Chiropractic to different people. It's a great thing!

I wish I would have been treated 4 years sooner! If anyone has any types of problems I recommend Chiropractic care before being put on pain medication and/or having surgeries."
