

“One Happy Baby” ...after Chiropractic!

“When Alex was born on 02-18-00 he came out twisting. Alex later would become fussy (colicky), had problems digesting formula (milk base) and had sinus problems. Alex was taken to the doctor’s regarding his feeding and sinus problems. We went through five types of formula before finding one that worked, however the sinus problem could not be easily addressed.

Alex had problems with choking on the drainage fluid in his ears. Doctors prefer to refrain from using drugs on baby’s due to their bodies can get use to the drugs and not be as effective when they get older. We had a problem.

The rest of the family had been seeing Dr. Digles along with our 8-year-old daughter. My husband and I decided we had nothing to lose and asked Dr. Digles to see if he could help Alex with his sinus problems.

Alex started his adjustments on 07-03-00 and has been one happy baby ever since. After his first adjustment Alex slept 15 hours straight. My husband and I were quiet concerned as Alex never slept so long. We checked him often but did not disturb him.

“When Alex woke up- He Was Ready To Go- it was like someone had recharged his batteries!”

Today, a year later, Alex sleeps better, enjoys the outdoors and has little to no problems with his sinus. Also, today Alex no longer has a problem with milk based products. I would recommend Chiropractic care considering the great success our son has had with it this past year.”
